**Consolidated Sustainment Activity Group
Budget Overview
Fiscal Year (FY) 2025 President's Budget (PB)**

The mission of the Consolidated Sustainment Activity Group (CSAG) is supply management of reparable and consumable items, and maintenance services. Reparable supply items are economically maintained through overhaul or repair. Consumable supply items are consumed in use or discarded when worn out or broken because they cannot be repaired economically. CSAG Maintenance Division (CSAG-M) and Supply Division (CSAG-S) services are executed under the Air Force Sustainment Center (AFSC) within the Air Force Materiel Command (AFMC) structure described in the Air Force Working Capital Fund (AFWCF) Overview. With supply chain management and depot maintenance functions in one center, AFSC analyzes and develops sustainment-wide procedures, processes, and metrics with the ultimate goal of increasing availability, capability, and affordability. This construct supports one of the Air Force's distinctive capabilities, Agile Combat Support, providing greater ability to posture for additional workload. It also preserves the viability of depot maintenance and the supply chain capabilities.

Maintenance Division

The CSAG-M repairs weapon systems and spare parts to ensure readiness in peacetime and to provide sustainment for overseas operations. The division enhances readiness by efficiently and economically repairing, overhauling, and modifying aircraft, engines, missiles, components, and software to meet customer demands. The CSAG-M depots have unique skills and equipment required to support and overhaul both new, complex components and aging weapon systems. During contingencies, the depots can surge repair operations and realign capacity to support the war fighter's immediate needs.

CSAG-M remains a fundamental element of both readiness and sustainability by providing a cost-effective, rapid repair capability. CSAG-M repair and overhaul capabilities are accomplished by one of the six centers within the AFMC, AFSC and its Air Logistics Complex (ALC) depots. The division operates on funds received from its customers through sales of its services.

Organic maintenance sites include:

Ogden Air Logistics Complex (OO-ALC), Ogden, Utah
Oklahoma City Air Logistics Complex (OC-ALC), Oklahoma City, Oklahoma
Warner Robins Air Logistics Complex (WR-ALC), Warner Robins, Georgia

Supply Division

CSAG-S is responsible primarily for Air Force-managed, depot-level reparable spares and consumable spares unique to the Air Force. Reparable supply items are economically maintained through overhaul or repair. Consumable supply items are consumed in use or discarded when worn out or broken because they cannot be repaired economically. In addition to management of these inventories, CSAG-S provides a wide range of logistics support services including requirements forecasting, item introduction, cataloging, provisioning, procurement, repair, technical support, data management, item disposal, distribution management, and transportation.

CSAG-S works to reduce the impact of Diminishing Manufacturing Sources and Material Shortages (DMSMS) and other obsolescence issues associated with aging aircraft fleets. Due to fleet age and utilized antiquated technology, the number of parts without qualified manufacturing or repair source is expected to continue to be a problem. To address these DMSMS and other obsolescence issues, CSAG-S re-engineers parts which can no longer be produced or repaired. CSAG-S also proactively identifies parts for which availability is at risk due to DMSMS issues, taking appropriate action to minimize adverse impact to weapon system readiness.

CSAG Customer Base

Maintenance and Supply customers include Air Force Major Commands, Air National Guard, Air Force Reserve Command, the Army, the Navy, other WCF activities (i.e., Transportation Working Capital Fund), other government agencies, public-private partnerships, and foreign countries. The CSAG divisions also are customers of each other; Maintenance Division repairs parts for Supply Division while the Supply Division provides parts that the Maintenance Division uses in depot maintenance services. Continued focus on readiness drives customer orders to both CSAG-M and CSAG-S.

CSAG Initiatives

Individual processes are being modernized within CSAG. AFSC continues to evaluate supply chain and maintenance processes to improve weapon system and equipment availability and to deliver customer support with increased velocity. Continual emphasis is on cost control in order to provide the best value to the customer.

AFSC strives to precisely define material requirements with respect to aging aircraft. Numerous problems exist with aging aircraft, such as first-time failures, loss of suppliers, Diminishing Manufacturing Source and Material Shortages (DMSMS), etc. To combat the aforementioned DMSMS issues and other supply chain challenges, the Air Force is fostering senior leader engagement through multiple forums:

- Expanding collaborative forecasting efforts through enhanced deep dive efforts
- Expanding market research and source development capabilities,
- Continually engaging with Defense Logistics Agency (DLA) and Air Force Contracting to streamline the purchase instrument process,
- Participating in DMSMS working groups charged with identifying critical obsolescence issues.
- Placing greater focus on current and proposed future technology trends
- Continuous monitoring for obsolescence/end of life alerts and strategically placed obsolescence mitigation opportunities

AFSC is pursuing alternative manufacturing technologies, additive manufacturing and establishment of a reverse engineering and manufacturing framework to rapidly solve availability issues derived from DMSMS, supply chain risk and obsolescence challenges. It is modernizing spares requirements planning to optimize inventory and implementing a multitude of other initiatives aimed at streamlining the supply chain process.

AFSC's Maintenance efforts are contributing to Air Force readiness and sustainability by providing a cost-effective, rapid repair capability. CSAG-M seeks to provide continuous core Air Force depot capability to retain in-house sources of technical competence; to continue to refine methods which enable the more efficient use of resources such as partnering with private industry, employing government owned/contractor operated facilities and augmenting in-house operations; and to find
