Narrative Justification:									
Description									
This capability represents an array of capital equipment investment requirements that aligns with the overall Air Force strategic objectives for sustaining depot facilities and equipment. Projects are in direct support of Aircraft, Missiles, Engines, Exchangeable, or Other Depot mission. WSS investments are designed, scheduled, and installed in accordance with established Air Logistics Complex or Aerospace Maintenance and Regeneration Group processes and priorities. WSS projects support the maintenance mission requirements to sustain the existing organic industrial base, save dollars through increased productivity, and support customer requirements. The equipment, when replaced, upgraded, integrated, or combined into depot industrial operations, leads to efficiency and personnel safety; supports hazardous waste minimization and pollution prevention efforts; enhances product quality; and increases customer satisfaction in performing the Air Force mission. Time sensitivity of projects to accommodate new or emerging workload capability and produce an acceptable end state is a critical factor in depot operations. As such, programming and execution in this capability is essential as equipment requirements may change. Documentation and project justification support are certified and maintained on file in accordance with the established guidance. \$6M has been allocated for Temporary Fabric Hangars (WSS) to accompany the ramp expansion to support the B-52 re-engine efforts.									
Economic Analysis									
An Economic Analysis was completed and is on file. EA Waiver has been obtained for the Ramp Expansion (Minor Con) and Temporary Fabric Hangars (WSS).									
Impact									
Upgrades are critical to maintaining system reliability and improving operating performance and ensuring the supportability of depot maintenance systems and equipment. New operating system will improve CSAG Maintenance Division's capability to actively monitor and make corrective actions in financial and operational performance. Support network infrastructure upgrades must be placed into service prior to upgrading operating systems. The Air Force will be unable to track financial, operational and equipment performance without planned infrastructure replacement and improvement. Lack of investments in this capability will impact the depot's ability to effectively monitor performance which results in cost increases, negative impacts to production, and reduction in aircraft availability for the warfighter.
